

# Content Authenticity Initiative

Kate Brightwell

Head of Policy and Government Relations UK & Europe, Adobe

## Why We're Here

- Responsible Use
- Intent to Deceive
- Lack of Transparency, Trust, Attribution
- Generative tools:
  - DALL-E
  - Midjourney
  - Stable Diffusion (open source)

## India WhatsApp rumors: Mob kills man in latest attack, 30 arrested

By Sugam Pokharel and James Griffiths, CNN

Updated 5:09 AM ET, Mon July 16, 2018

## Why Not Detection?

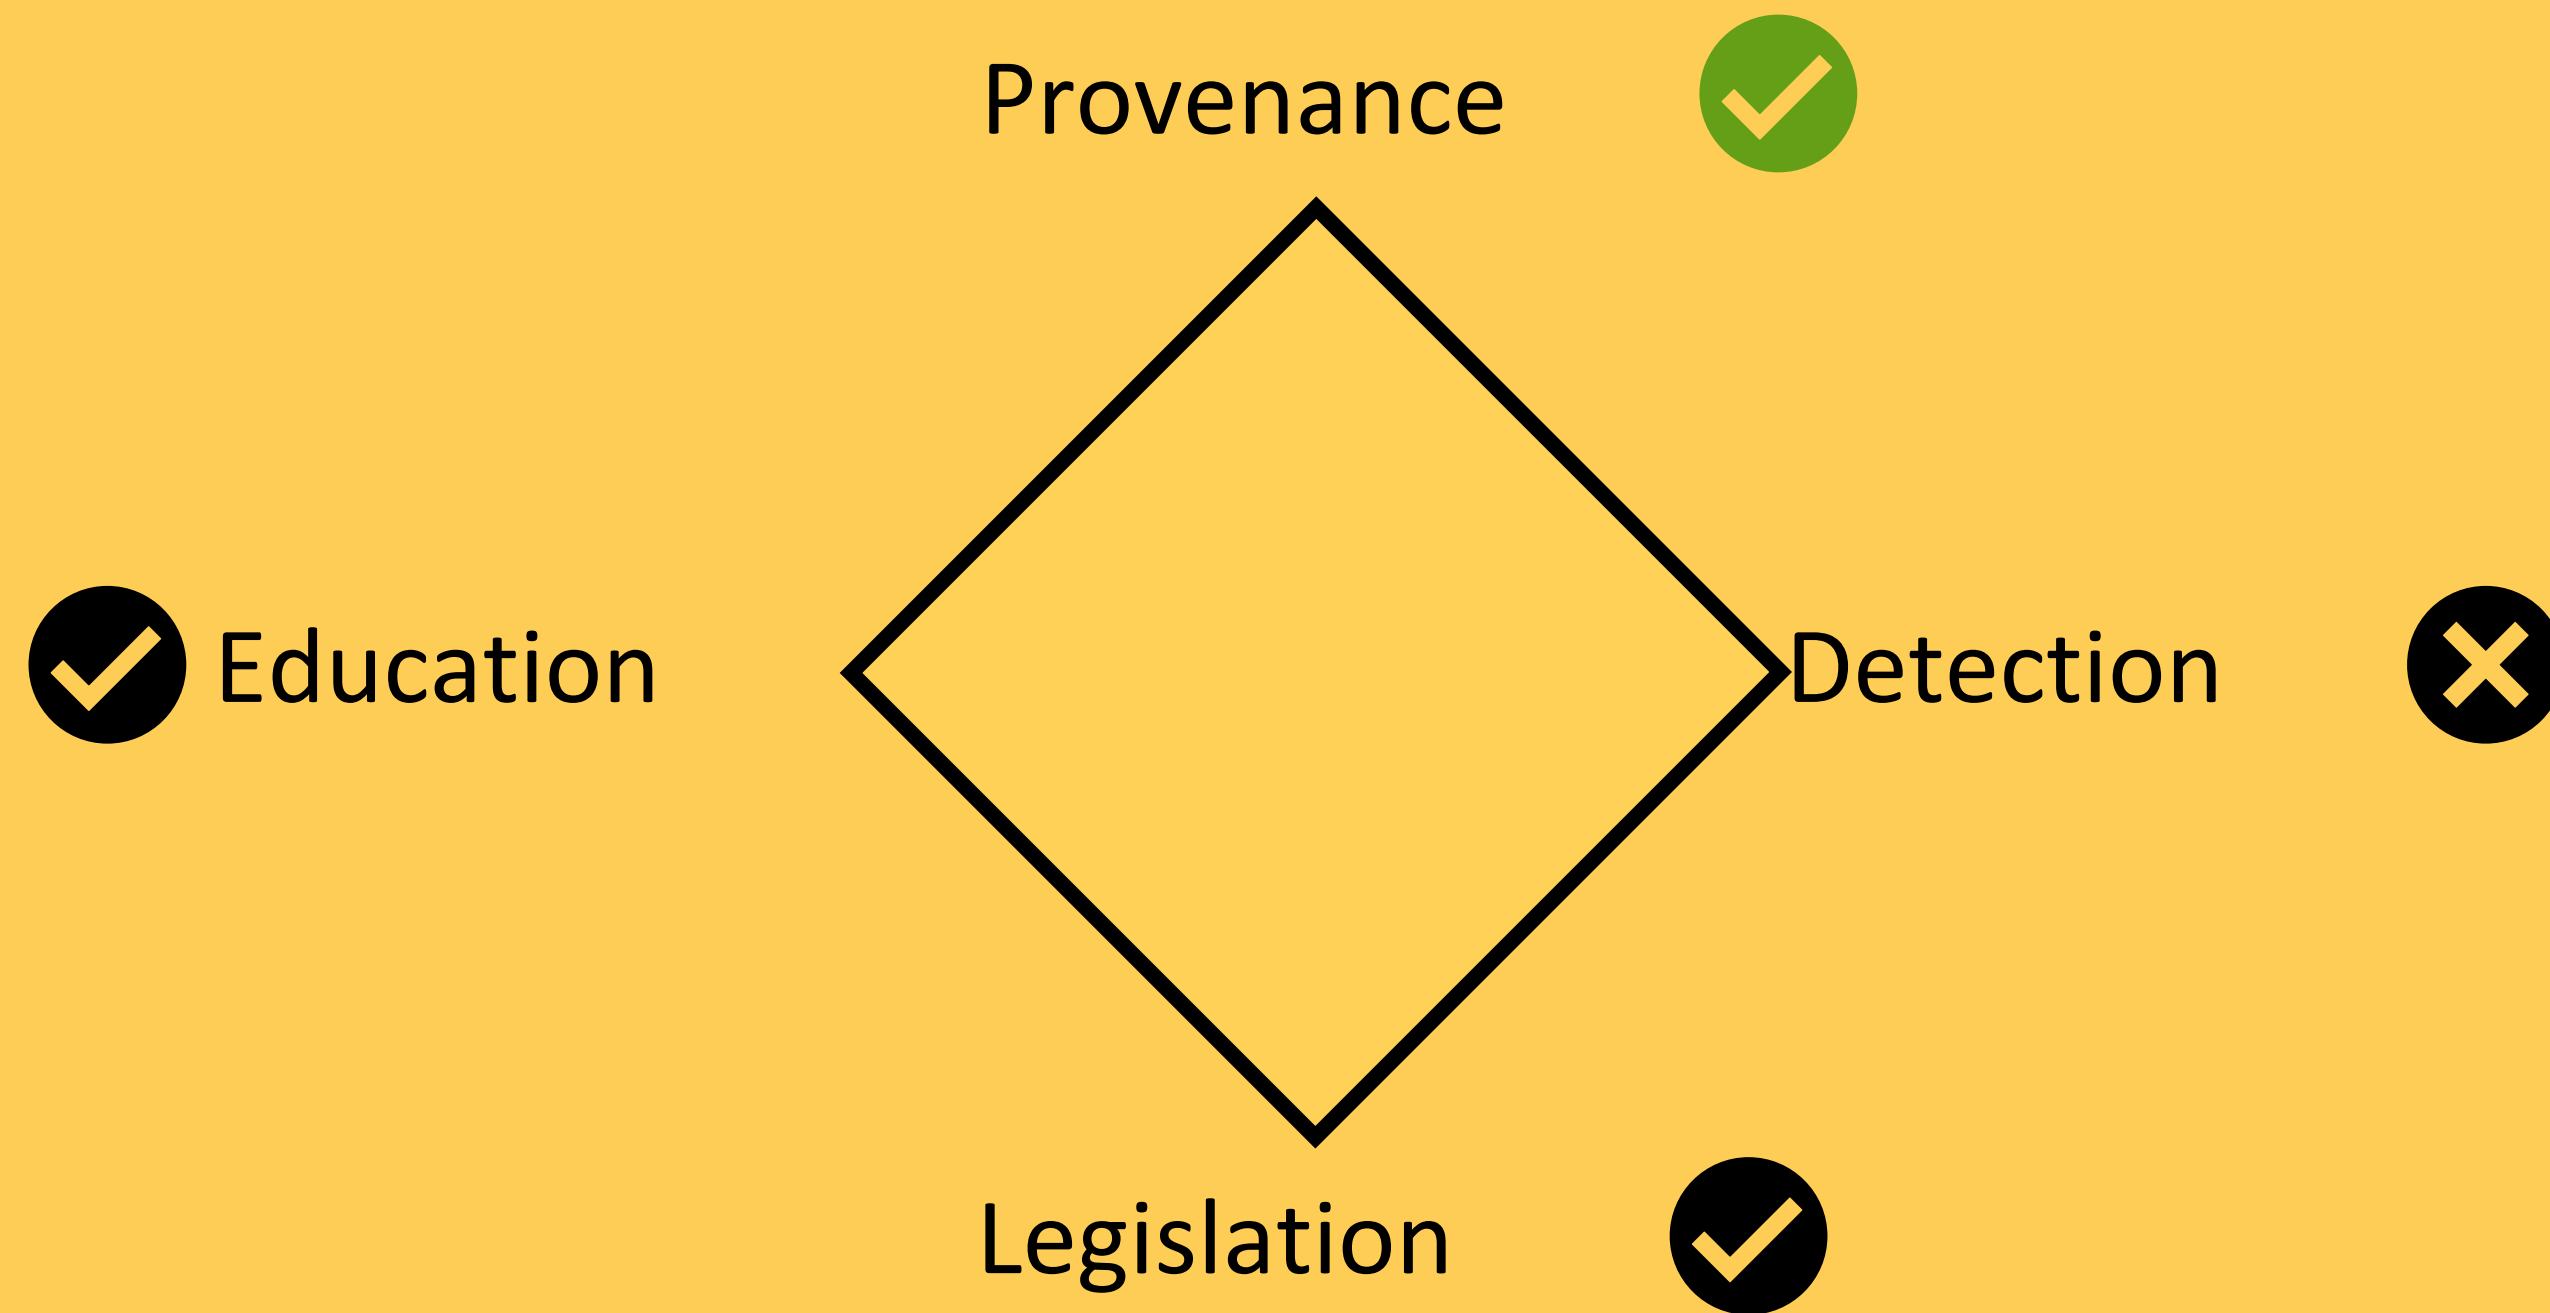

Detection is likely to fail  
because it's an arms race.

The 2020 Deepfake Detection Challenge  
achieved only a 65% hit rate.

Generative engines like DALL-E 2 and  
Midjourney can produce photorealistic  
images from textual input.

# The fight against mis/disinformation

# **What is Provenance?**

## **Where We Are Now**

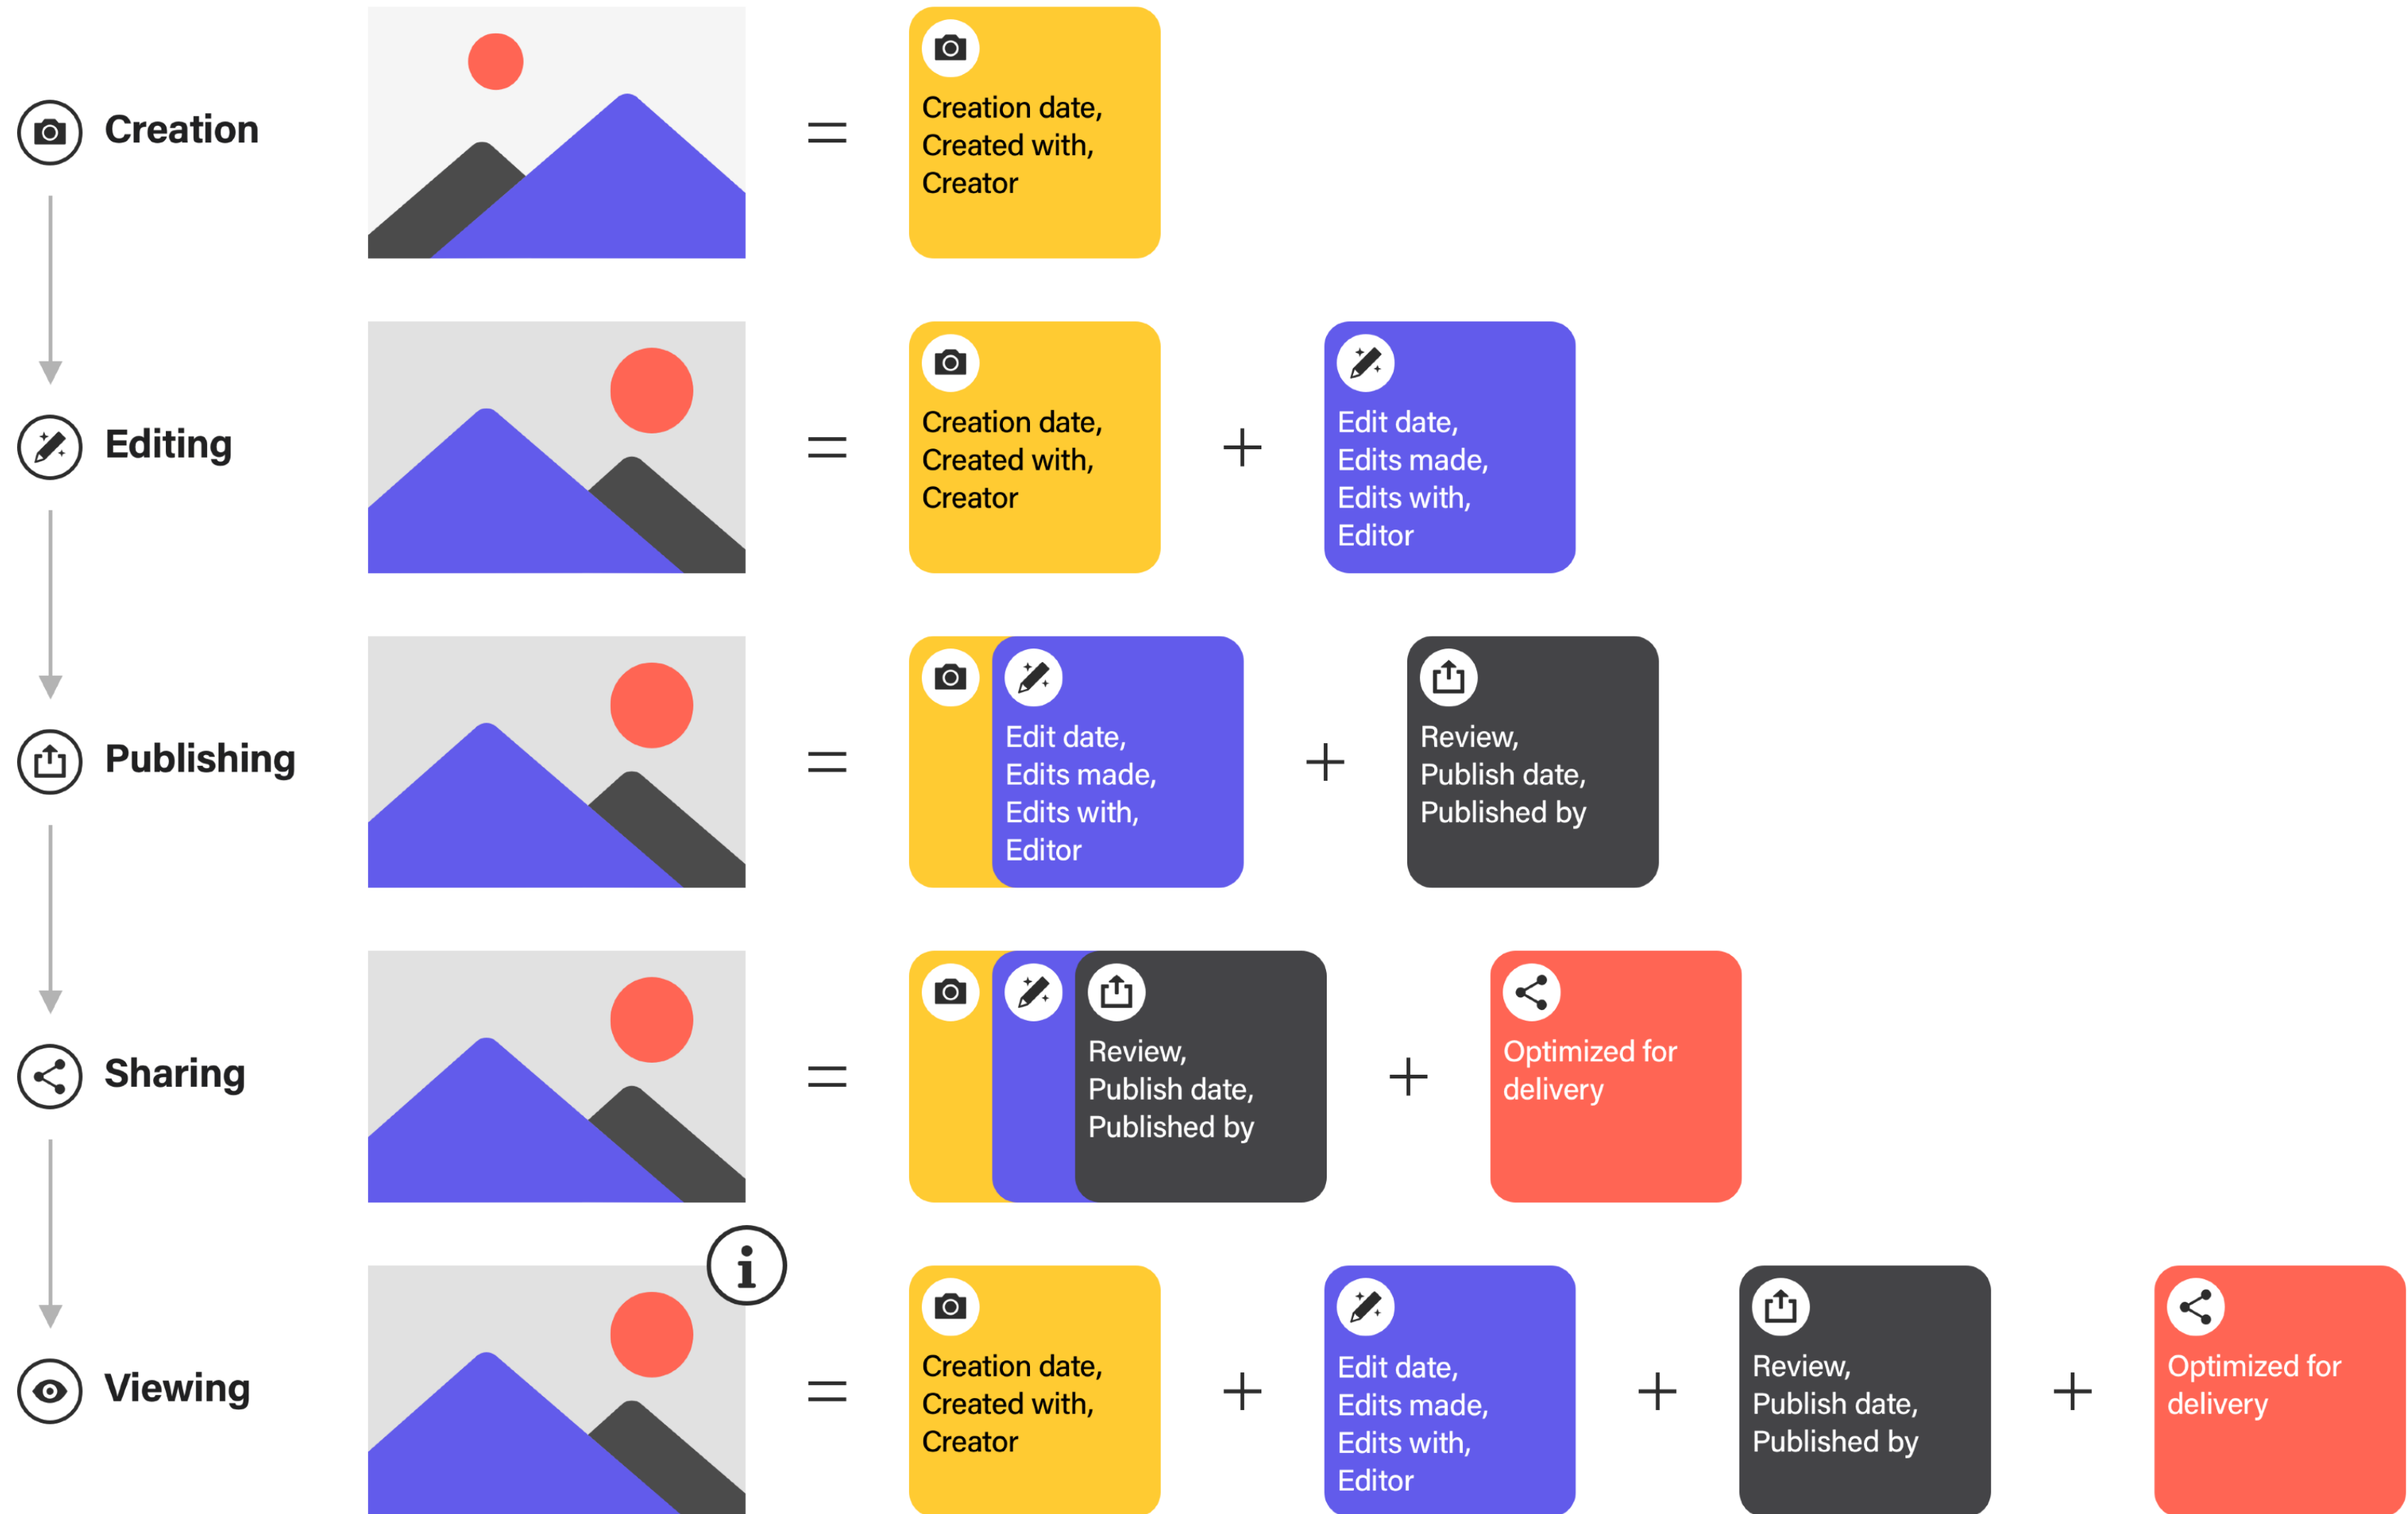

## **The Road to Adoption**

# What is Provenance?

**Digital Provenance is  
the ground truth about how an asset was:  
Made,  
Altered,  
Delivered.**

**Instead of guessing what's false,  
we can prove what's true.**

## Key Product Concepts

- Make it *simple* for creators and organizations to capture and publish provenance.
- Make it *intuitive* and *expected* for content consumers to view provenance.

## Guiding Principles

- Privacy
- Global Accessibility
- Protections Against Misuse
- Fit with Existing Workflows
- Simplicity and Minimal Cost
- Interoperability
- Extensibility

## Provenance-enabled media has a *Manifest*:

- Contains captured assertions about the media
- Can be associated with the creator's identity or organization
- Is cryptographically bound to the media and signed

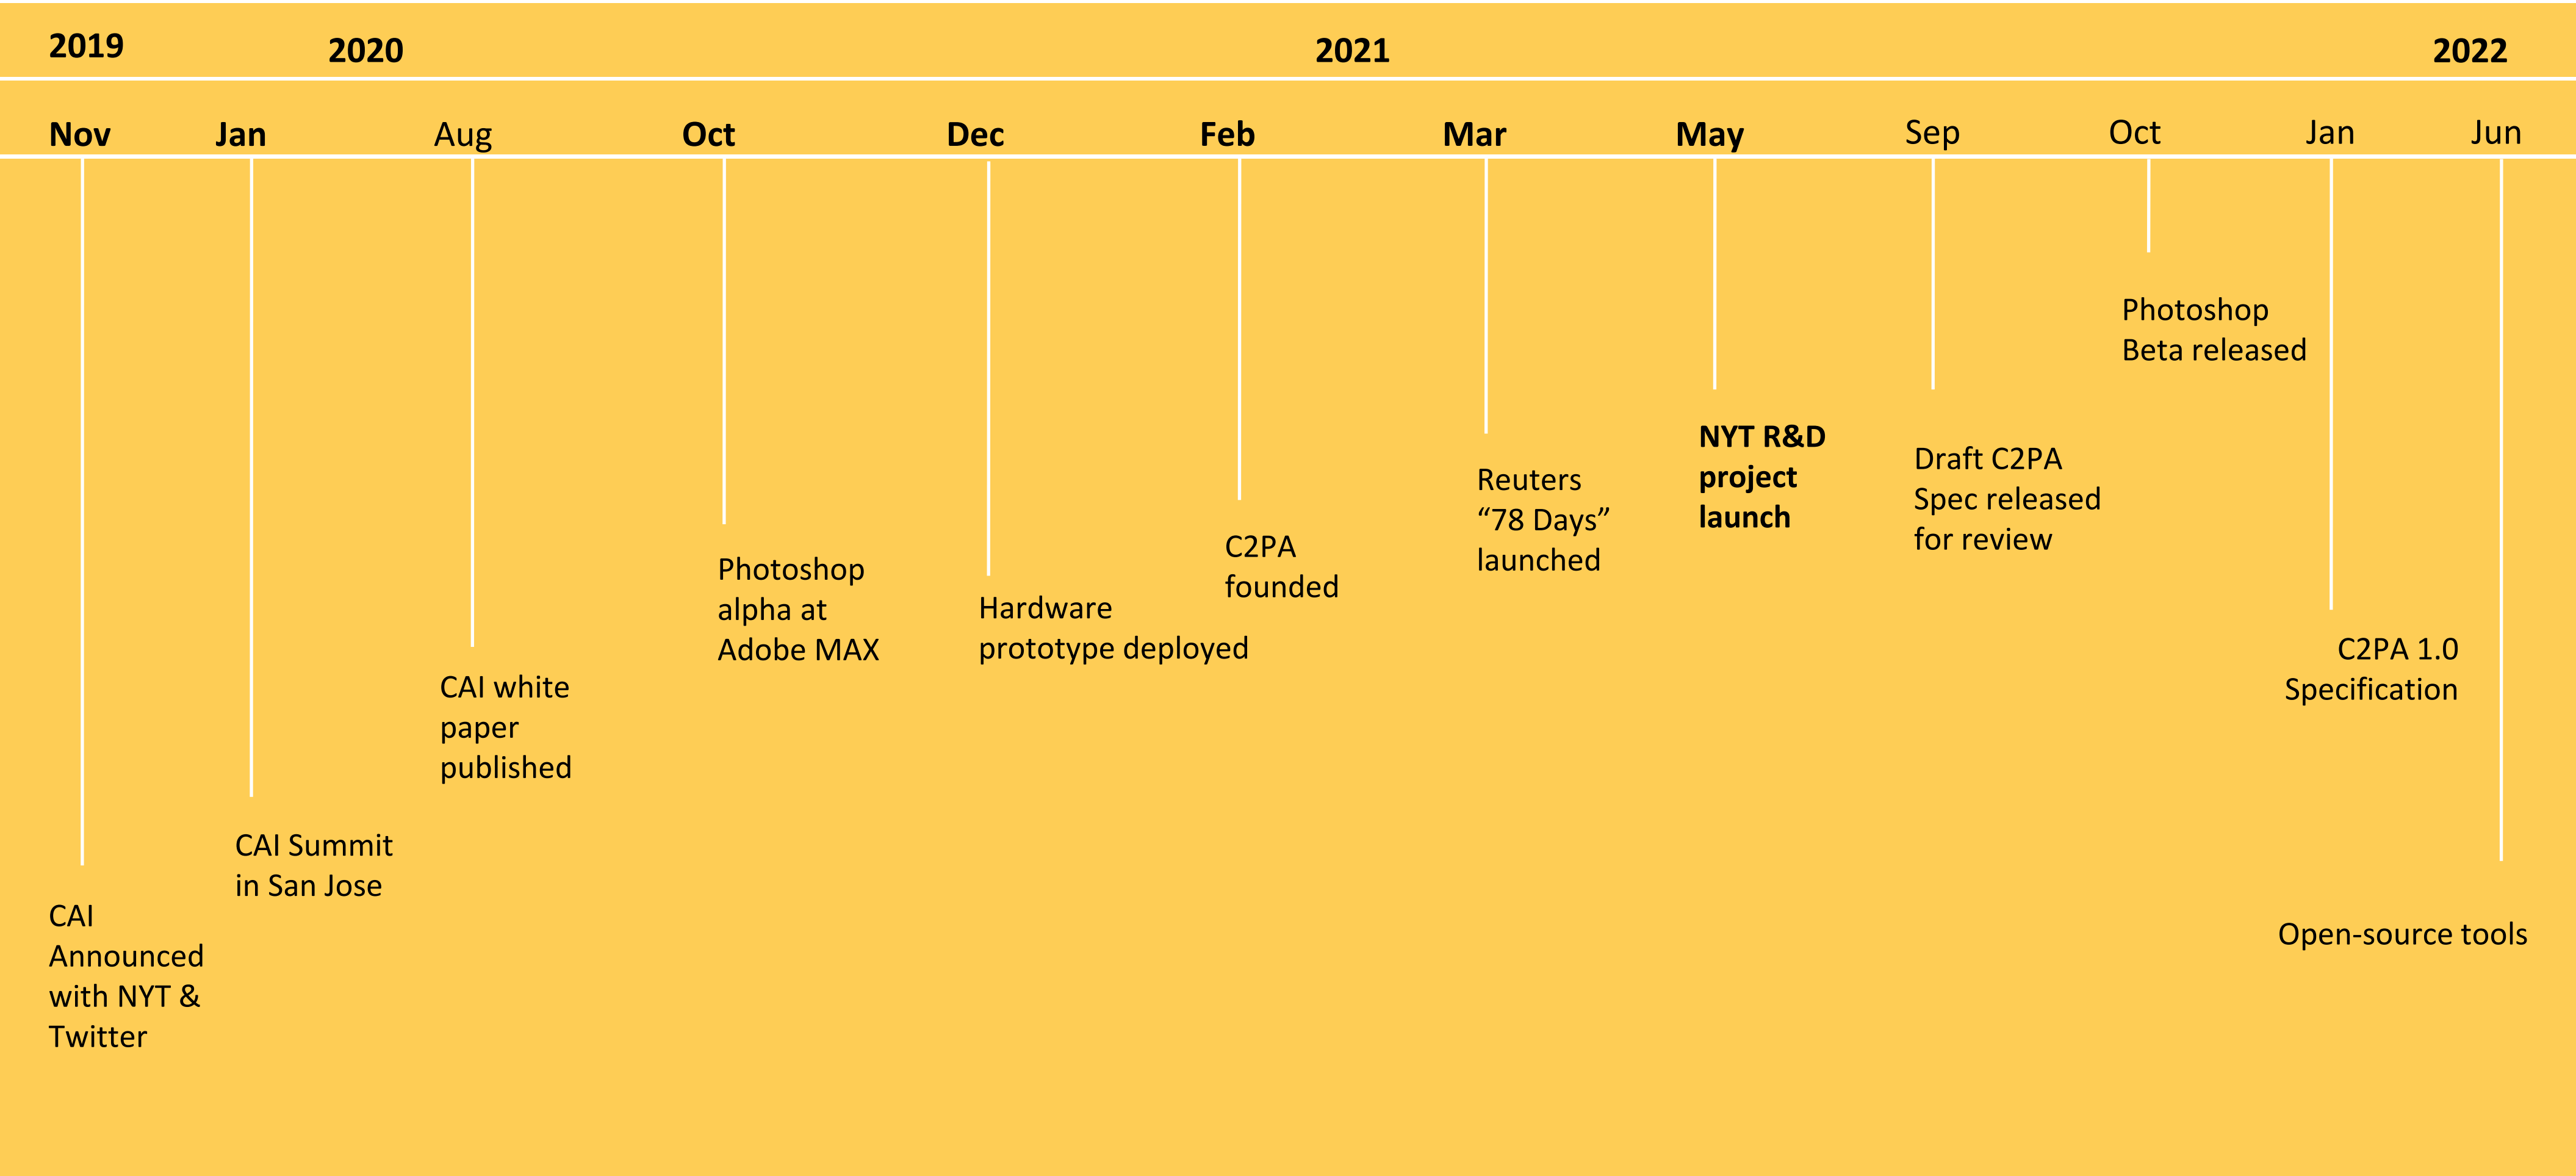

## If you have media with a *Manifest*, you can be certain:

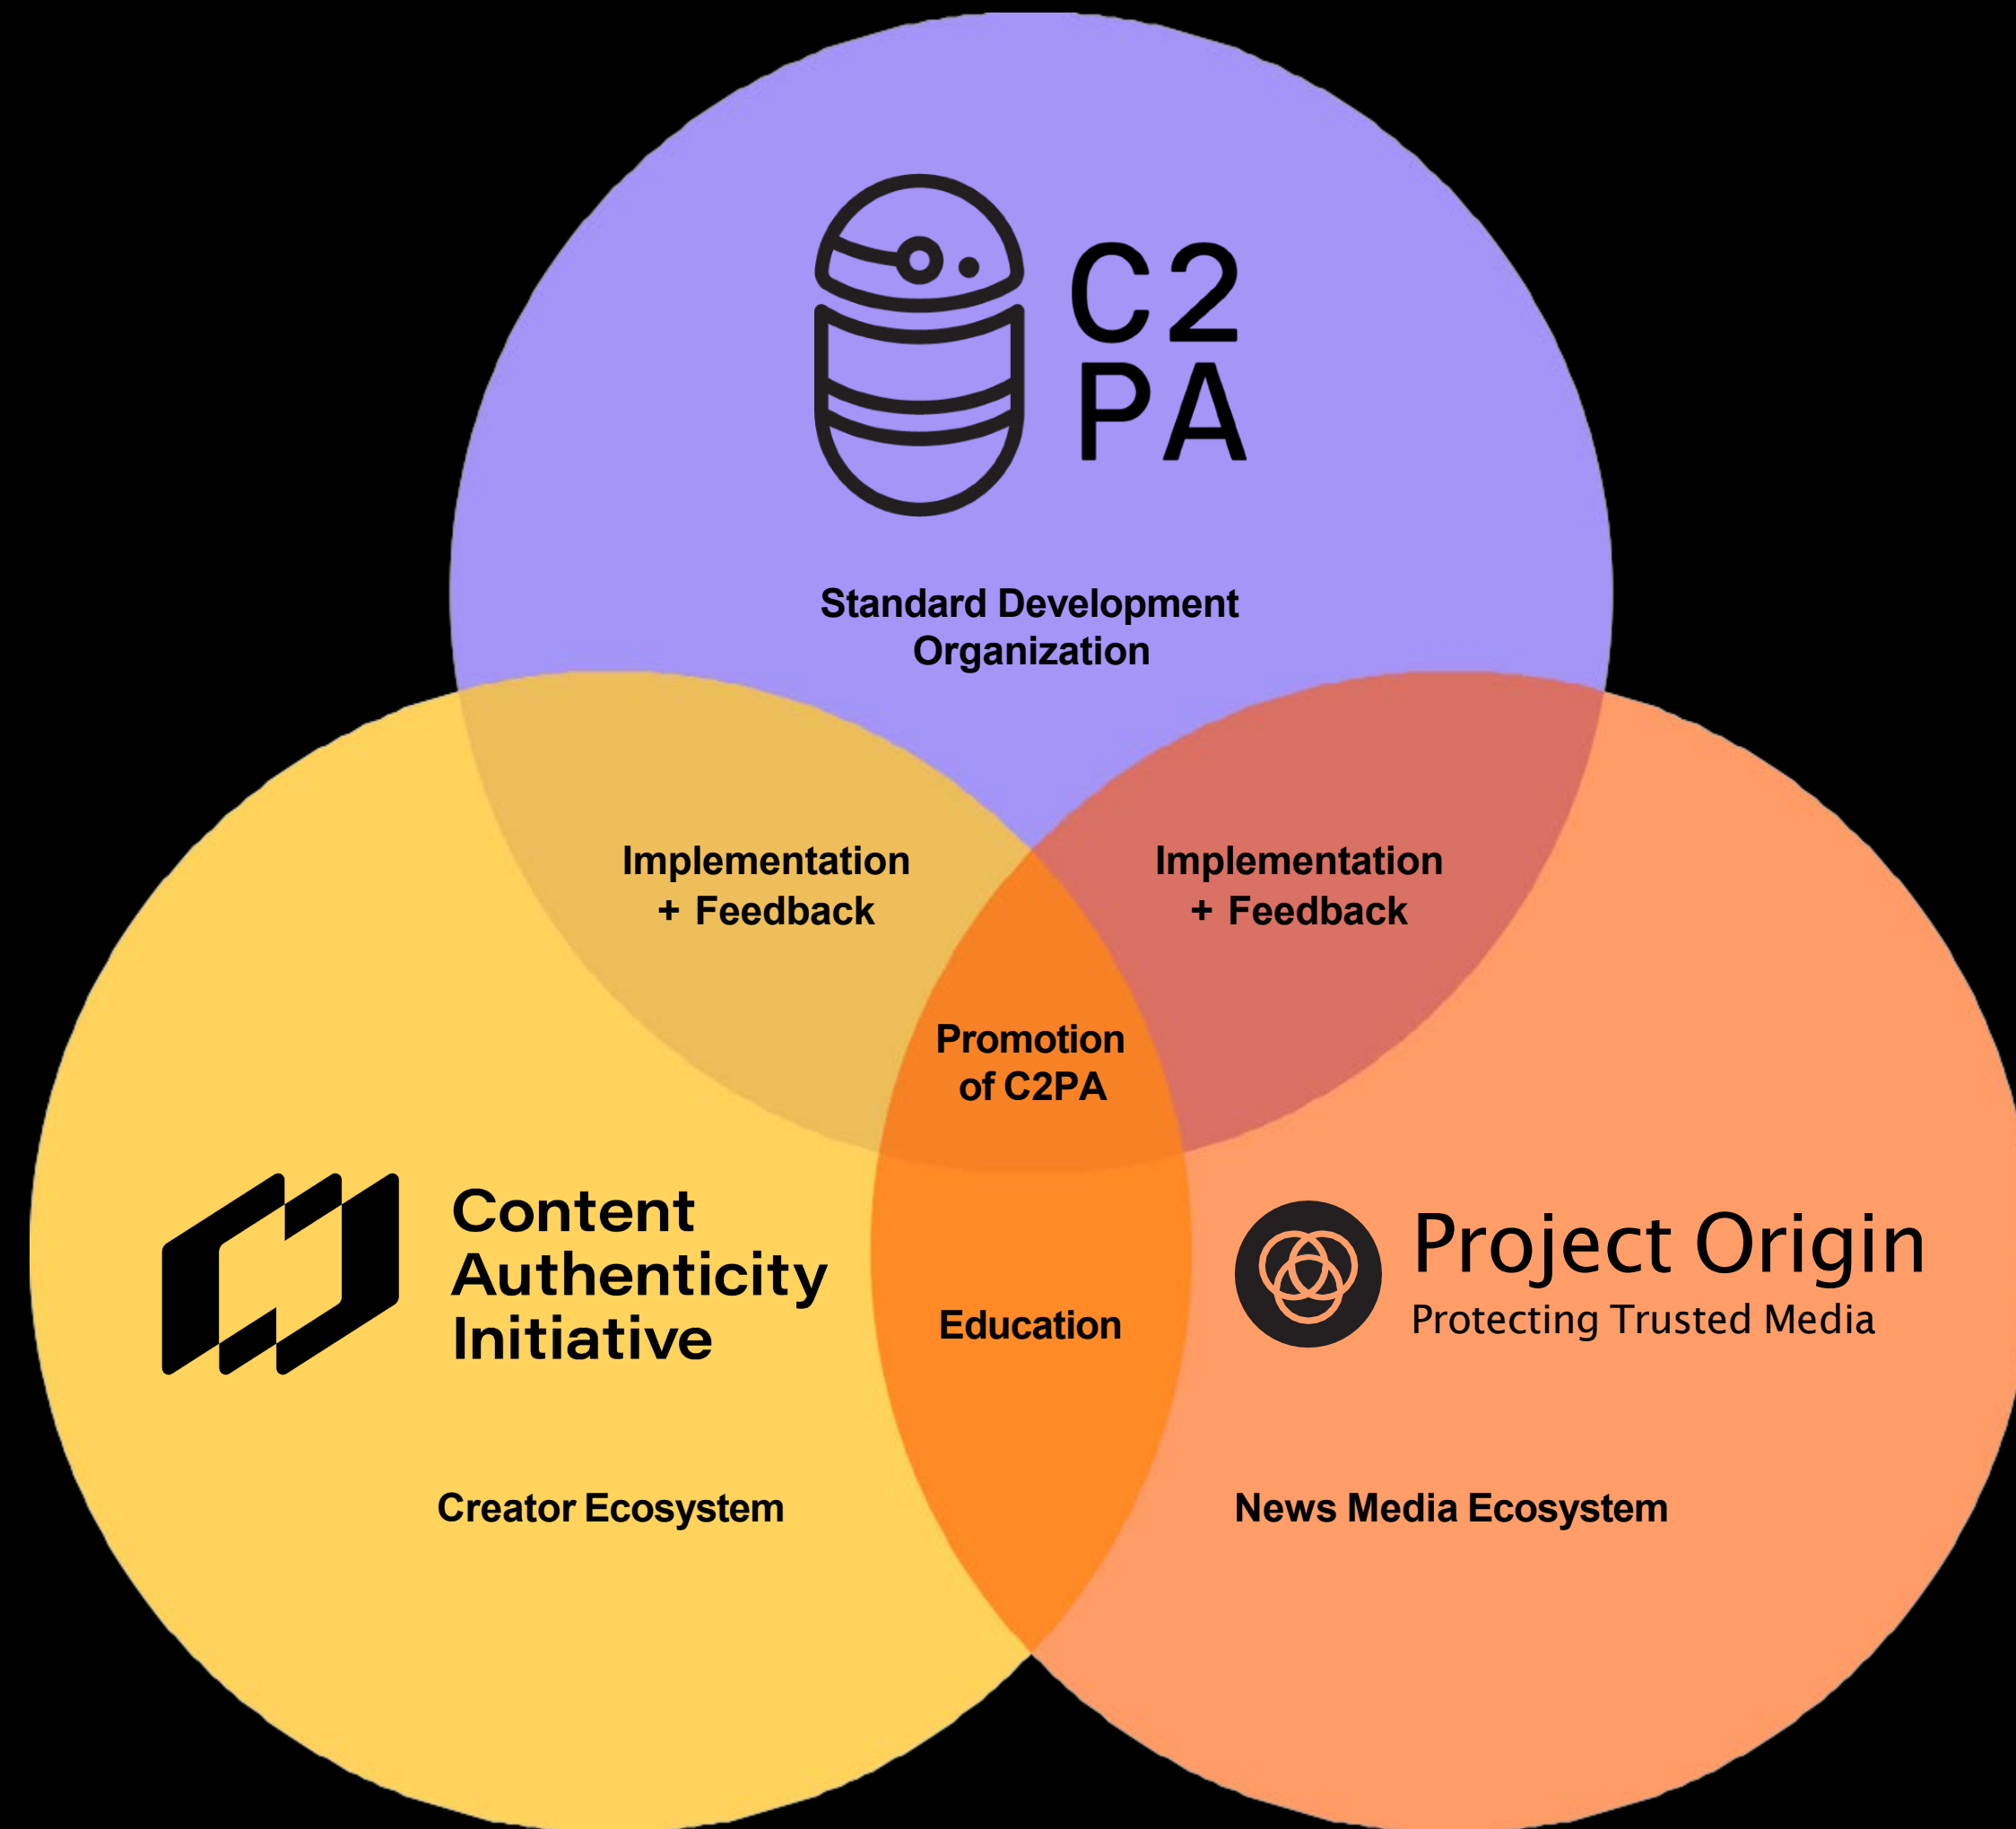

- It came from the person or organization that signed it
- It has not been altered

# Where we are now

# Timeline

# Coalition for Content Provenance and Authenticity (C2PA)

- Run under the Linux Foundation
- Spec developed in < 1 year
- v1.0 released in January 2022
- Images, audio, video (to start)
- Threats/Harms + UX Conventions

Content  
Authenticity  
Initiative

Membership 800+

# 4

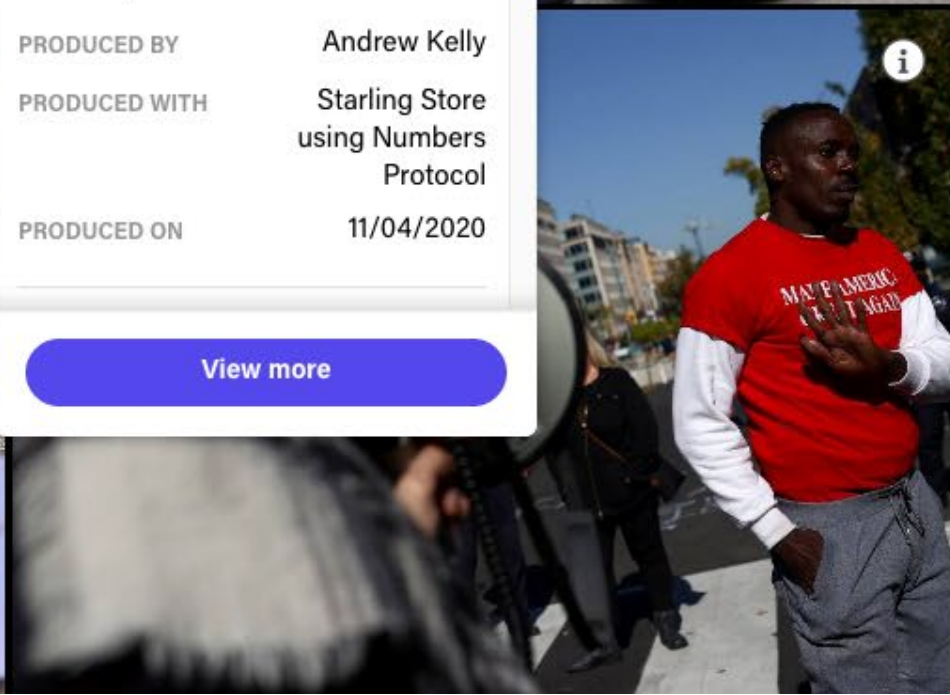

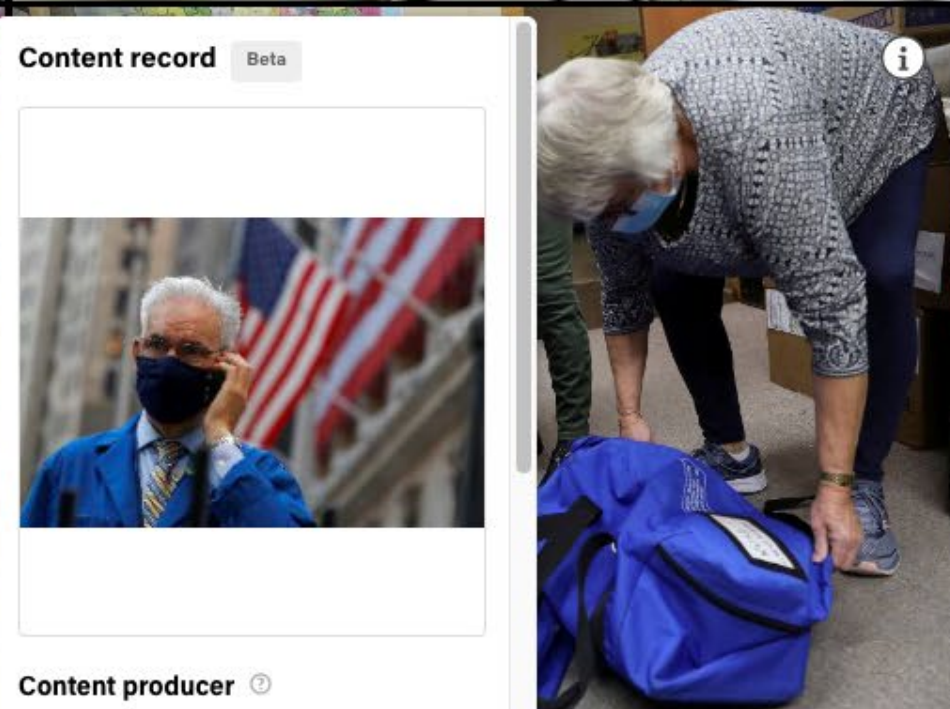

**key areas  
of focus:**

- Standards specifications via the C2PA
- Deployment through member collaboration and Adobe products
- Education and advocacy
- Open-source tools

# Content Credentials in Photoshop

Broad adoption of the C2PA standard requires participation.

- Camera hardware
- Mobile phone hardware
- Social media platforms
- Publishing systems
- Operating systems

Participants in the C2PA, CAI, and Project Origin communities are committed to deploying the standard in products. The ecosystem is growing day-by-day.

# Role of Regulators

- Media literacy duties – provenance can empower users
- Consideration of platform and publisher adoption and risk assessments/incentives
- Advisory boards looking beyond detection and including industry experts
- Ability to recommend open technical standards
